

Medicinal Chemistry & Chemical Biology Division

The Adrien Albert Award

The Adrien Albert Award is the premier award of the MCCB Division and is given for sustained, outstanding research in the field of medicinal chemistry or chemical biology.

The research upon which the award is made must be conducted wholly, or largely, within Australia and New Zealand.

The award is open to all Members of the RACI. The award winner will be invited to present a lecture at the next RACI Medicinal Chemistry & Chemical Biology Division Conference to showcase their research to the medicinal chemistry and chemical biology community in Australia.

The conference registration costs of the award winner will be covered.

The winner will be selected by a panel of at least 4 judges (with gender balance), who are members of the RACI Medicinal Chemistry & Chemical Biology Division.

Nominations for the award can be made by any Member of the RACI, however self nominations are not eligible.

Nominations must include the following information:

- names of (i) award nominee and (ii) nominator;
- curriculum vitae of nominee;
- concise statement of the nominee's impacts and contribution to medicinal chemistry and/or chemical biology research;
- list of published research papers, and any other material relevant to the nomination; and
- names of two referees with detailed knowledge of the nominee's impact and contributions.

Nominations are to be submitted to the RACI Awards Team (awards@raci.org.au). Members will be advised when nominations open for submission.

If the committee finds that submissions fail to meet the required standard, no award will be granted.
